

CMSC 4113/5313

Human-Computer Interaction

Assignment 5

Using JavaFX, repeat either assignment 2 (MVC-based Java Swing Image Viewer) or assignment 4 (MVC-based Java SWT Calculator). The same restrictions and requirements that applied to the previous assignment apply to this one, with the sole exception that JavaFX (and only JavaFX) must be used as the UI API.

The 15 points of credit will be distributed similarly to assignment 2 or 4, whichever you choose to implement. You must only implement one of either assignment 2 and 4, not both.

You must complete the assignment by **Monday, February 6 at 11:59 PM** and submit the source code (not compiled class files, nor a JAR) on Blackboard. Should Blackboard be down or unavailable, you may e-mail the source code files to nicolas.grounds@oc.edu

Some extra credit can be granted for creative extensions to the basic requirements listed above.
